The content review would involve correspondence of our editor to the reviewer from Indonesia and/or international and this process is different to the format review process that only involves our internal staff.

It is really difficult to predict the duration of time that would take to get the result of content review due to other activities of our reviewers. Therefore, the duration of time of format review may not be the benchmark for content review.

Abstract

The current COVID-19 pandemic has an impact on accelerating the digital transformation of various sectors in Indonesia, one of which is the health sector. Hence, many mobile applications of smart healthcare service have been developed, which can be a solution for people to get better health services. The aim of the research is to evaluate the mobile application (Speedit and SpeedQ) for smart healthcare service based on the user perspective and the characteristics of the mobile application. The research is an analytic observational study that contains five stages of research. There are 64 respondents in the research using a questionnaire as data collection tool. Then, through a literature review, seven variables are determined, and a research model is proposed. The evaluation of the mobile application characteristics
